

Augmented Intelligence for Network Operations/AIOps for CSPs

Network monitoring has become increasingly complex with devices from multiple vendors across multiple technologies. AIOps understands your network and provides intelligent fault monitoring, fault detection, alerting and auto-remediation in a single integrated platform powered by ML in real-time.

End to End Network alarm handling and broader capabilities

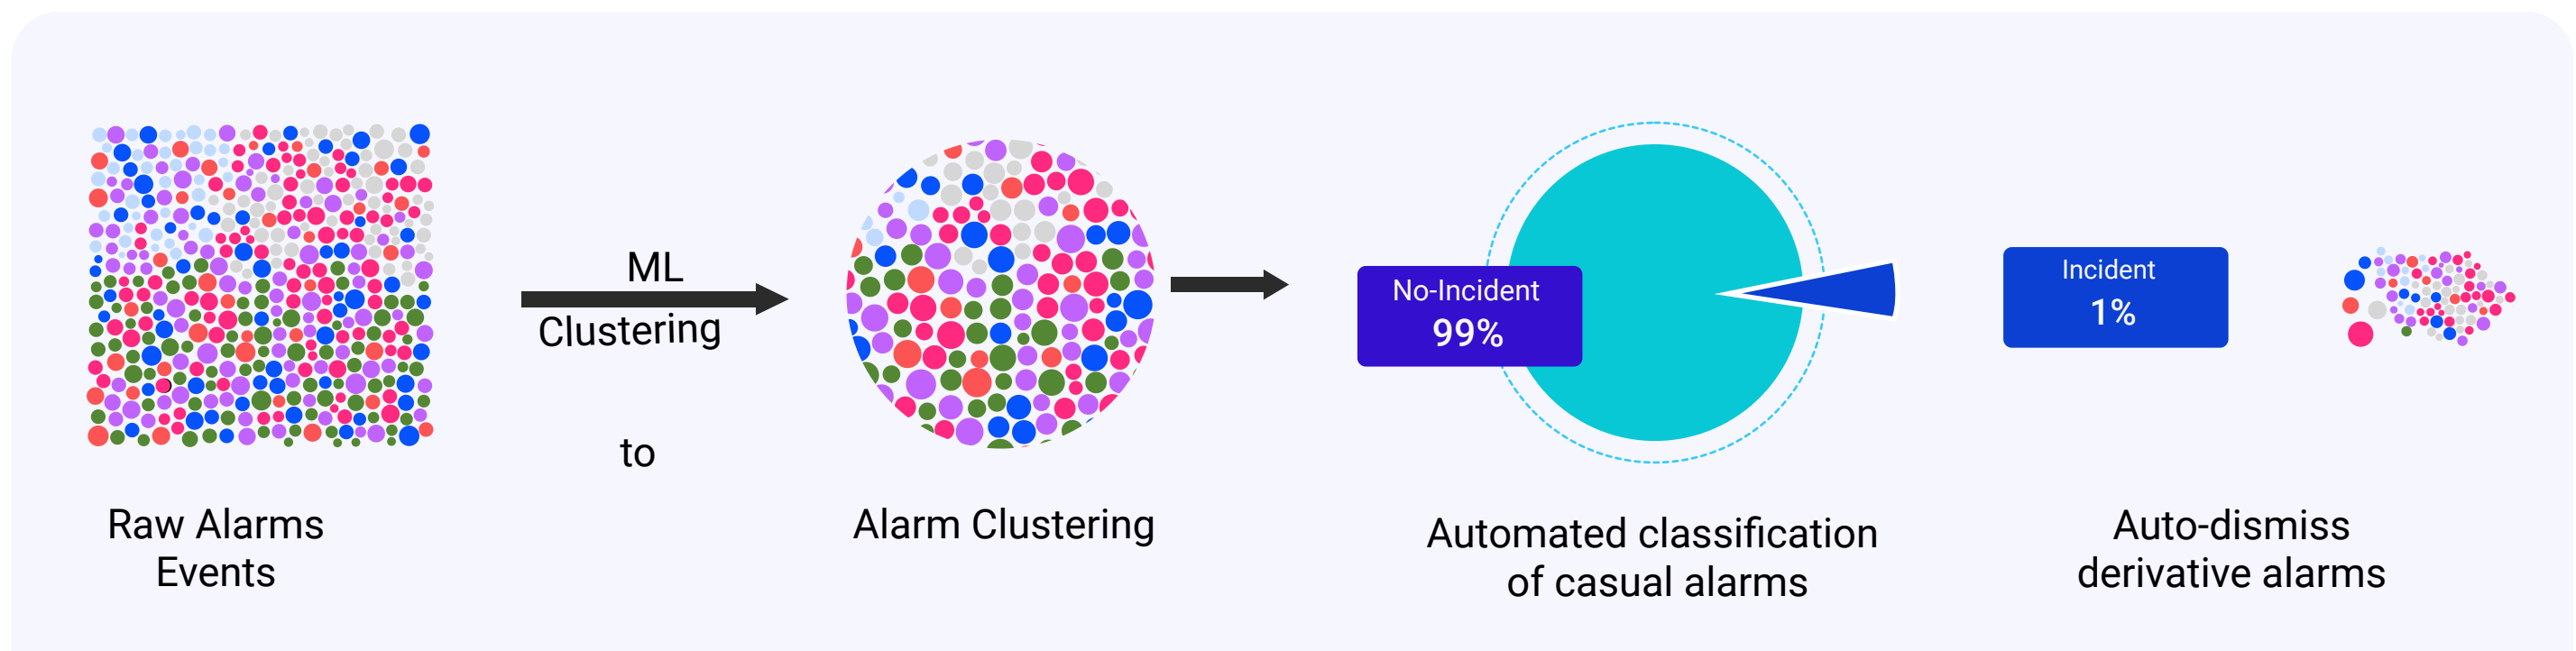

Leveraging AIOps enables to provide deep insight into your networks and has the ability to manage data across multi-vendor, multi-domain and multi-technology platforms which will help in managing your network more efficiently and proactively than ever before.

Benefits

Reduced Mean Time to Acknowledge, Evolve toward Zero-Touch Network Operations, Improve prediction of faults and problems, Easier Diagnosis, Faster Resolution on Network and Service Problems

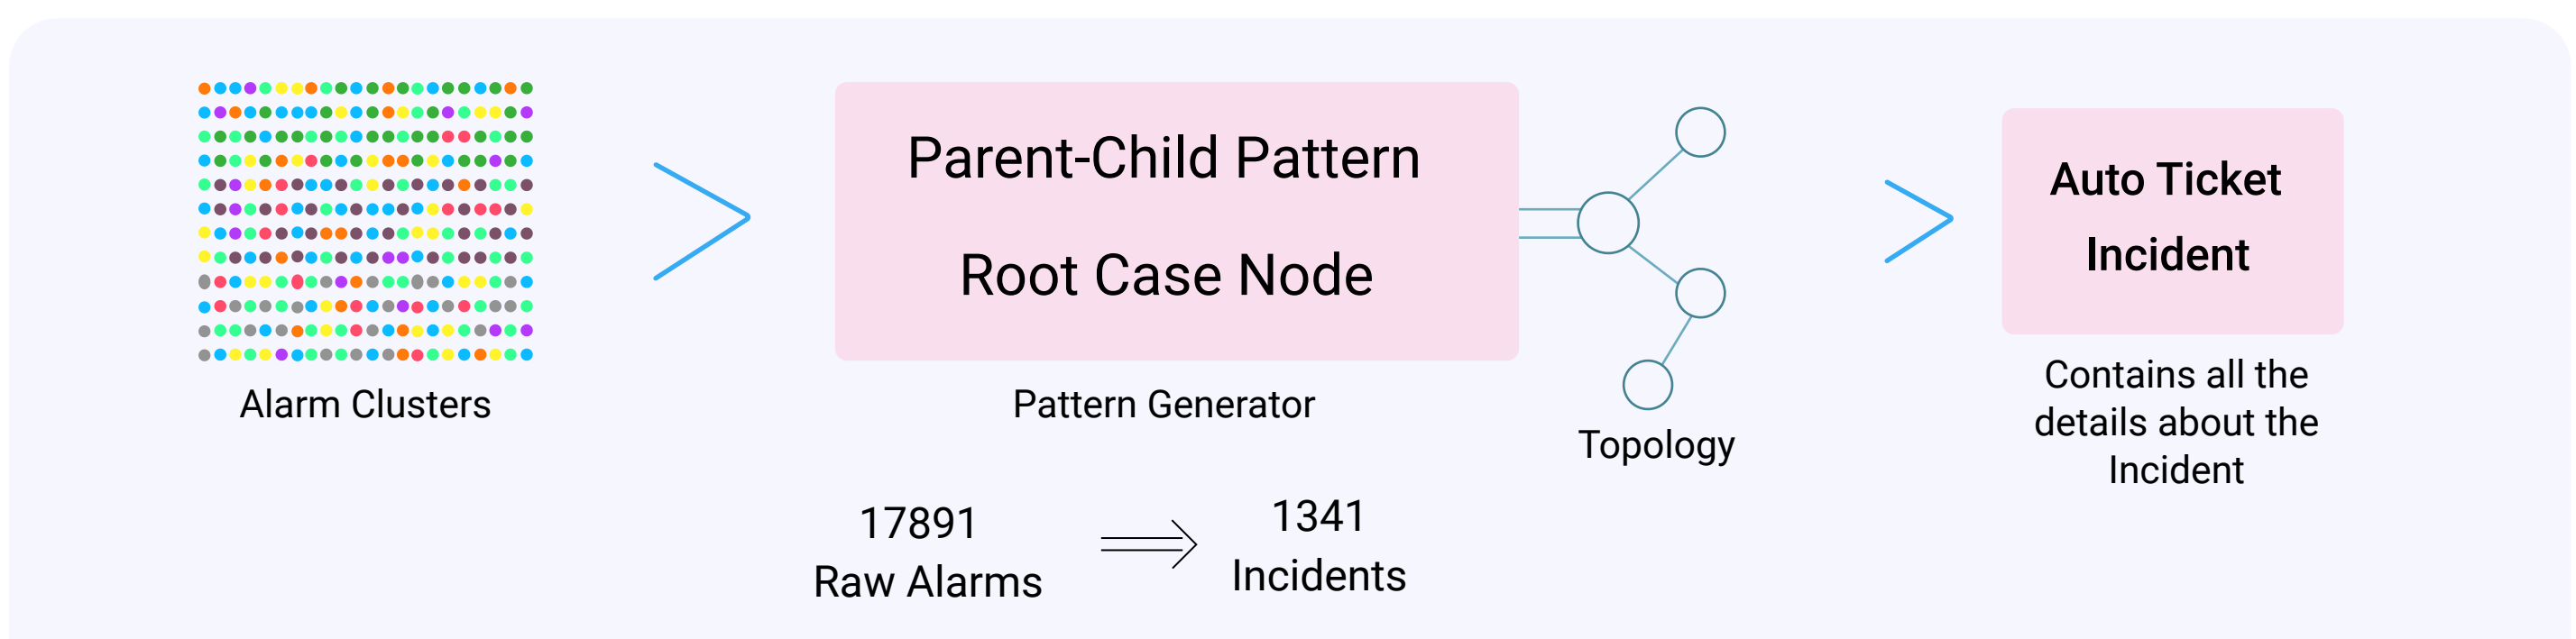

Network Alarm Compression and Analytics Module

Features: ML-based alarm grouping/ Clustering alarms with context, ML-based Alarm Prioritization

Teams	Benefit	Value
Network Operations	<ul style="list-style-type: none"> ✓ Reduced MTTA, MTTD and MTTR ✓ Alarm streamlined 	<ul style="list-style-type: none"> ✓ Improved Operational Efficiency
Field Operations	<ul style="list-style-type: none"> ✓ Operational Efficiency 	<ul style="list-style-type: none"> ✓ Reduced OPEX

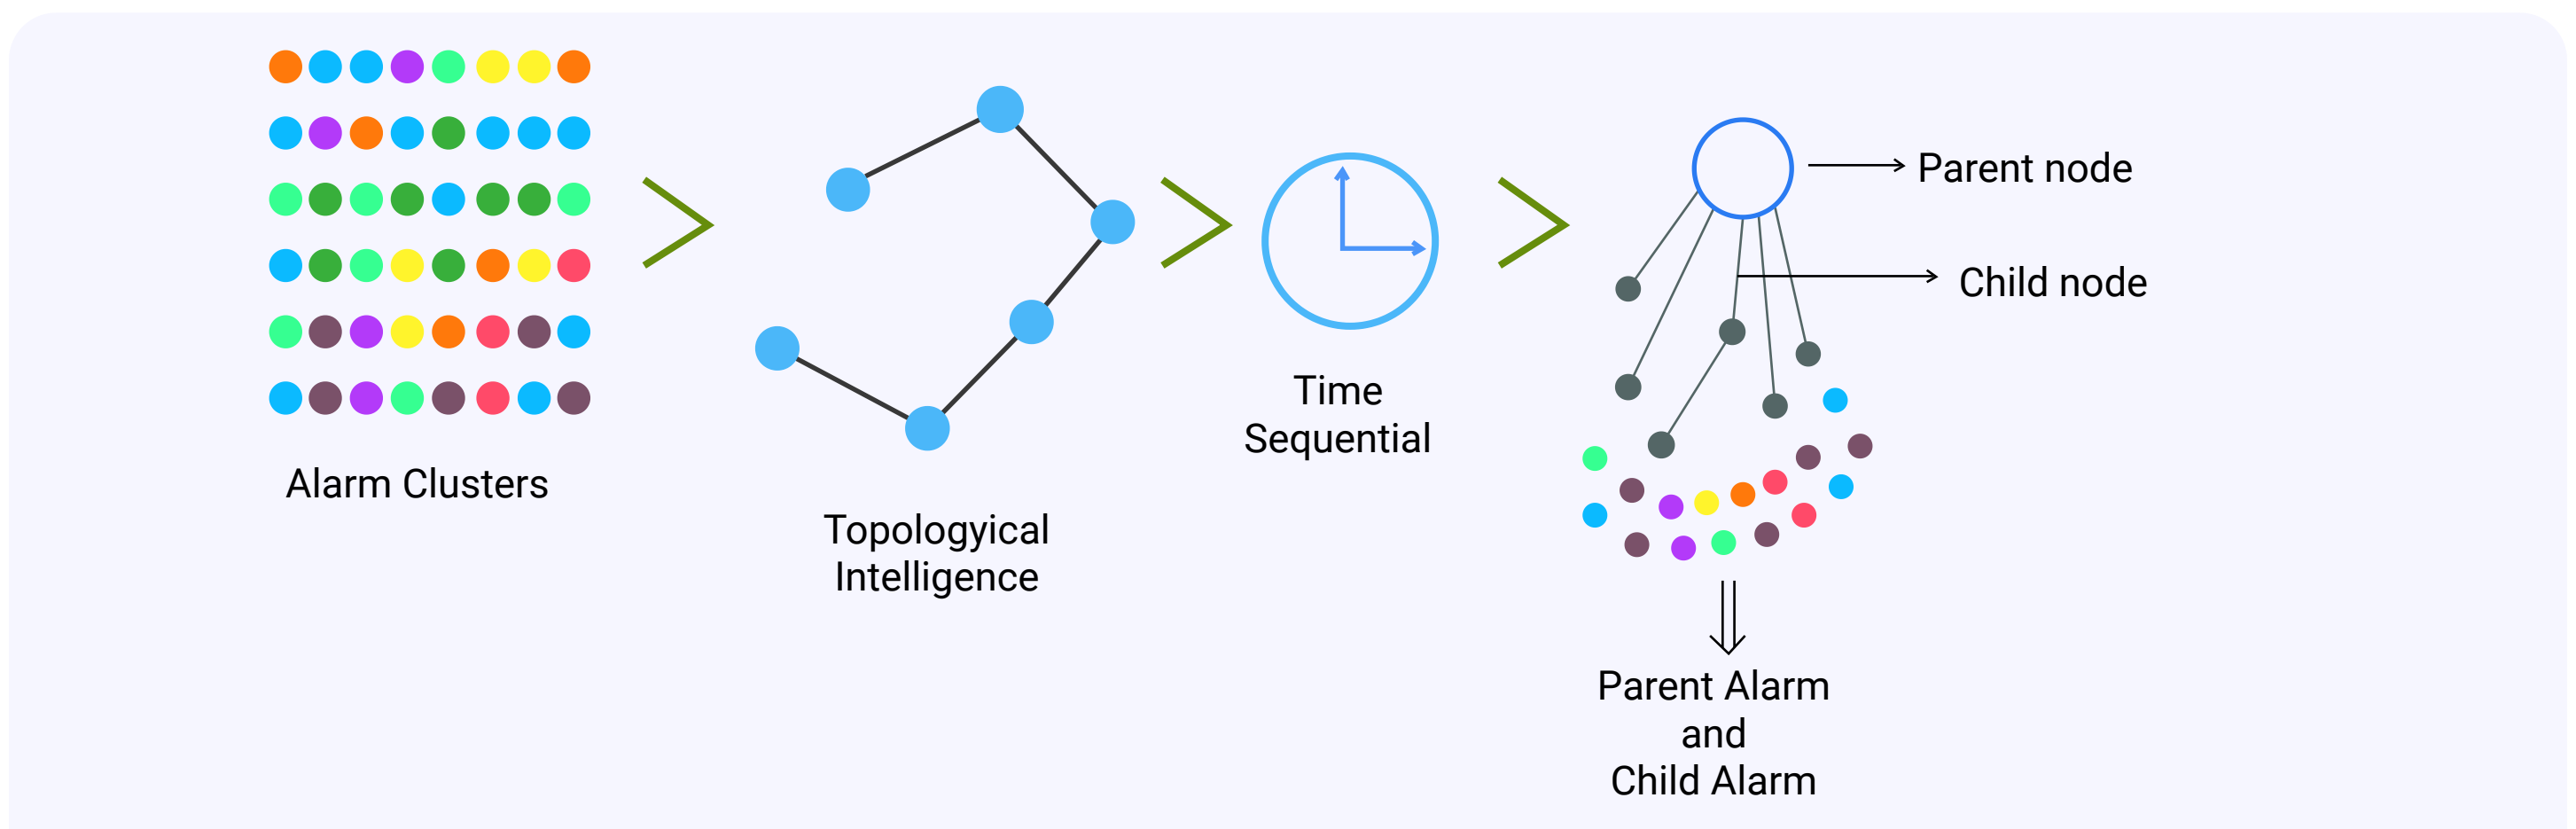

Features: Sequence-based ML Methods, Fault Localization

Teams	Benefit	Value
Network Operations	<ul style="list-style-type: none"> ✓ Reduced operator's analysing time 	<ul style="list-style-type: none"> ✓ Improved Operational Efficiency
Field Operations	<ul style="list-style-type: none"> ✓ Seamless navigation in finding the chain of alarms ✓ Alarm fleet or alarm floods are controlled 	<ul style="list-style-type: none"> ✓ Reduced OPEX

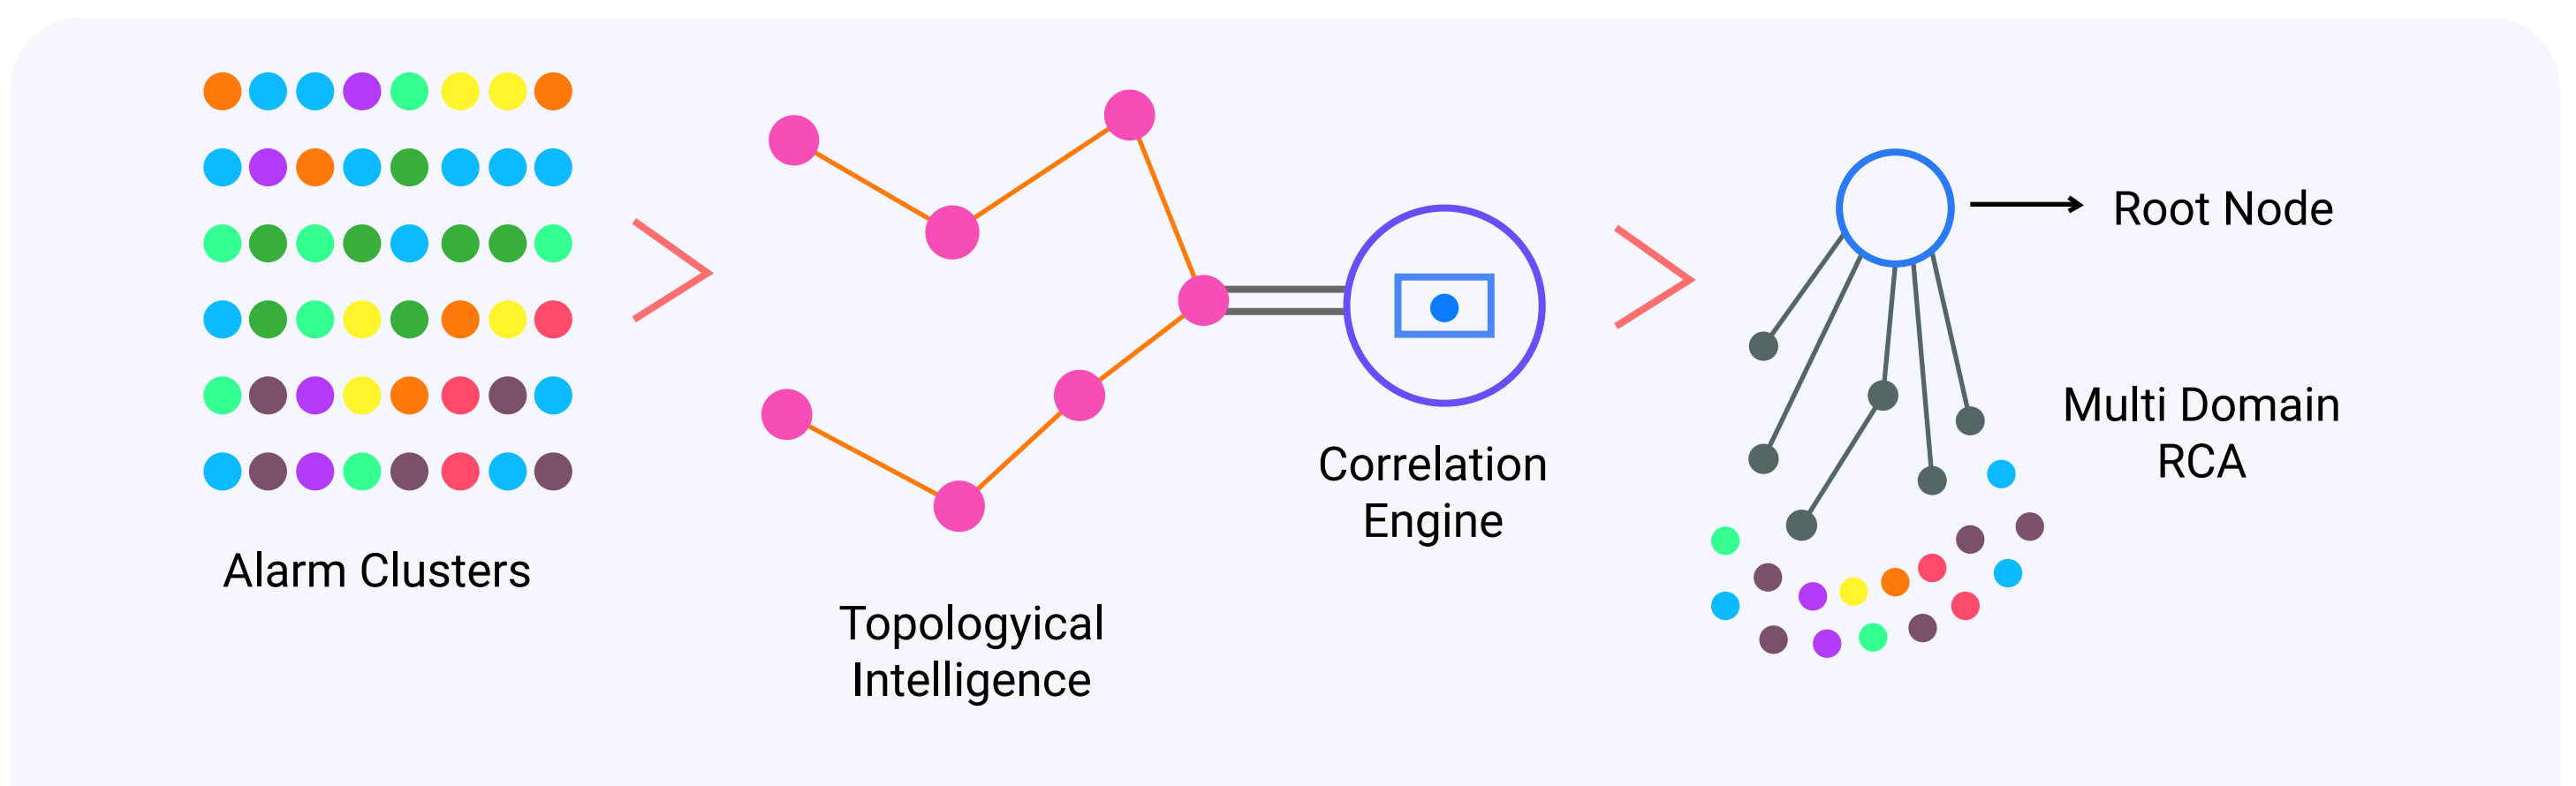

AI-Infused Operational Analytics Module

Features: ML Based Correlation, Root Cause Analysis

Teams	Benefit	Value
Network Operations	✓ Easier identification of probable root cause and device	✓ Improved Operational Efficiency
Field Operations	✓ Increased operational efficiency	✓ Reduced OPEX
Network Planning	✓ Increases the uptime across the network	

Features: Alarm Prediction and Ticketing

Teams	Benefit	Value
Network Operations	✓ Proactive alerting system	✓ Improved Operational Efficiency
Field Operations	✓ Collaborative space for Operators	✓ Faster alarm triage
Customer Care	✓ Automated process workflow trigger at the edge
